

Case Study: Contract Manufacturing Dry Toner Glosser

Through early supplier involvement, PEKO engaged in the successful commercialization of a dry toner “glossing” system with a global imaging OEM. With the world’s largest print trade show, DRUPA, as the product introduction deadline, PEKO provided the engineering and manufacturing resources to fully implement the product supply stream for a successful launch. Further efforts of value engineering (sheet metal frame/uni-body concept) and productivity insured a competitive product in the market place.
