

## Case Study: Contract Manufacturing High Speed Impact Printer

A leading office equipment provider required a cost effective manufacturing solution for a high-speed printer at the legacy stage of the product life cycle. The printer fulfilled the duplicate sheet (8 sheet carbon copy) impact printing required by the market at 4800 (132 character lines)/min. PEKO provided a complete solution through our comprehensive in-house manufacturing capabilities for machining, sheet metal, precision electro-mechanical assembly, and complete unit testing. Coupled with our value engineering efforts, the product life was extended allowing longer program bottom line contribution for the client.
