

Case Study: Product Development Flexographic Plate Developer

A global chemical company required complete manufacturing of a thermal flexographic printing plate processor. The thermal plate-making process (diagram lower left) produces a printing plate with a raised image suitable for high volume printing and simplifies the chemical process currently in place. Having extensive manufacturing capabilities within the company allowing cost-reducing ideas to flow directly from the manufacturing staff to the engineers early on, PEKO is uniquely positioned as a manufacturer.

These units are fully tested and shipped directly to our customer's end-users with a service parts depot shipping daily, globally providing full field support.

PEKO is a complete manufacturing solution for the client.
