

Case Study: Contract Manufacturing Print Proofing System

A major chemical company has a presence in the pre-print proofing sector of the large volume printing market. A key aspect of the business is a proofing system consisting of a laminator/wash-off pair complete with process and chemicals. As market acceptance grew, outsourcing became a necessity to meet demand. PEKO was able to offer the complete solution through our in-house manufacturing capabilities including; machining, sheet-metal, electro-mechanical assembly, and full lab testing with certified technicians. Our continued engineering efforts in value engineering and product enhancement provided an increased size capability in a cost efficient manner. All of this resulting in a profitable, agency approved, product shipped directly to our client's end user.
