

## **Case Study: Product Development Generic Automation Platform**

A global semi-conductor equipment supplier required a reduced capability automation platform. Their existing portfolio of products prohibited a full turnkey offering to clients demands in their market. From a “clean sheet”, PEKO developed a cost effective solution to complement the customers existing product through collaborative engineering, yielding multiple size options that are chosen by the customer’s end users. All production including machining, sheet metal, and controls are conducted through our in-house contract manufacturing capabilities.
